

RxPense

The RxPense® is a secure personal medication dispensing and remote monitoring solution suitable for blister packaging and ensures older people, chronic care patients and people with disabilities at home or in residential care take the correct medications on time. It notifies caregivers or medical professionals if a dose is missed and it records the consumption of 'as-needed' and over-the-counter medications. It can also capture (through external sensors), monitor and store vitals along with the electronic patient record. It gives users access to digital health care and telemedicine.
